INT. J. CONTROL, 1995, VOL. 61, NO. 6, 1473–1476

SUBJECT INDEX (Vol. 61)

Actuator and sensor fault detection and isolation using residual generator, 1423
Adaptive control based on special compensation methods for time-varying systems subject to bounded disturbances, 667
Algorithm
  for decomposition of two-time-scale linear systems via the relevant eigenspace, 549
  for identification of smooth nonlinear systems based on parametrized linearization families, 1013
  for model predictive control, computational efficiency improvement using wavelet transformation, 859
  for studying trade-offs between H_∞ attenuation and uncertainty tolerance, 823
  simple, for the stable/unstable decomposition of a linear discrete-time system, 255
Asymptotic properties of the LQG feedforward self-tuner, 1169
Asymptotic stability regions estimation, trajectory traversing method, 917
Autonomous nonlinear systems, describing-function based criterion for route to chaos, 211

Bilinear systems, repetitive control with applications to semi-active isolation of vibration, 1265

Calculus of complex matrices, 749
Chaos in autonomous nonlinear systems, describing-function based criterion, 211
Computation of generalized H_2 optimal controllers, 999
Continuous-time system, digital identification, 149
Control
  H_∞ type, generalized, with measurement noise, polynomial solution, 443
  $\mathscr{H}^2$-optimal, finite-dimensional, fixed order, of infinite-dimensional discrete-time systems, optimal projection equations, 641
  adaptive, based on special compensation methods for time-varying systems subject to bounded disturbances, 667
  deadbeat, by measurement feedback, two-sided approach, 229
  discrete-time, adaptive, of systems with unknown deadzones, 1
  discrete-time, linear, use of neural networks, 1253
  hierarchical, two-level strategy for robot manipulators, 1201
  model predictive type, computational efficiency improvement using wavelet transformation, 859
  of bilinear systems, repetitive, with application to semi-active isolation of vibration, 1265
  of flight, application of scheduling local nonlinear control laws by exogenous signals, 759
  of hybrid step motors via simplified linearization technique, 1143
  of low-speed tricycle-model steering, problem formulation, 783
  of mechanical systems, decentralized control and overlapping decomposition, 559, 571
  of robots, robust, decoupled, adaptive, 309
  of submarine depth, system design, 279
  of turbo-alternator, predictive excitation control, 507
  of unknown plant, robust, IFAC 93 benchmark, 589
  precision tracking type of non-minimum phase systems with zero phase error, 791
  predictive excitation type, of turbo-alternator, 949
  robust
    of free-floating space robot systems, 261
    optimal, 885
  stochastic, robust, using internal model principle and internal model control, 809
  systems, sampled-data feedback type, state covariance assignment, 719
  theory, error actuated output feedback type, for differential linear repetitive processes, 981
Controllability, integral, and maximal stability of singularly perturbed systems, application of block Lyapunov sum, 47
Controller
  LQG feedforward self-tuner type, asymptotic properties, 1169
  design
    for performance guarantees in uncertain regulating systems, 127
    parametric state feedback type, for multivariable systems, 1457
    feed forward type, for periodic signals in non-minimum phase processes, 695
  predictive, generalized, stability and convergence analysis based on state-space modelling, 193
  Wiener–Hopf optimal three-degree-of-freedom type, numerical calculation, 757
Controllers
  H_2 optimal, reduced-order, design using a homotopy algorithm, 97
  H_2-optimal, generalized computation, 999
  commutative, use of rational eigenvector approximations, 333
  stabilizing, discrete, satisfying an H_2 norm bound, state-space formulae, 65

Deadbeat control by measurement feedback, two-sided approach, 229
Dead-time estimation for process control, knowledge-based approach, 1045

Decentralized control and overlapping decomposition of mechanical systems, 559, 571
Decentralized control design, uncertain systems with strong interconnections, 1363
Decentralized control systems, robust performance, by expanding sequential designs, 1297
Decomposition of two-time-scale linear systems via the relevant eigenspace, 549
Deflation method, implicit, for ill-conditioned Lyapunov and Sylvester equations, 1119
Depth control system design, for submarine, 279
Describing-function based criterion for a route to chaos in autonomous nonlinear systems, 211
Design
  H_∞ control analysis for nonlinear systems, 459
  limitations, inherent, for linear sampled-data feedback systems, 1387
  of controller, for performance guarantees in uncertain, regulating systems, 127
  of decentralized control, uncertain systems with strong interconnections, 1363
  of feedforward controller for periodic signals in non-minimum phase processes, 695
  of observer in receding-horizon predictive control, 171
  of on-line identification for a flexible beam laboratory adaptive control experiment, 525
  of reduced-order, H_2 optimal controllers using a homotopy algorithm, 97
  of robustness of linear continuous-time systems, Lyapunov stability robust analysis, 1233
  of servomechanisms via H_2-optimization, 475
  of submarine depth control system, 279
Digital identification of a continuous-time system and some related issues, 149
Discrete-delay perturbed systems, D-stability analysis, 493
Discrete nonlinear systems, stabilization analysis, 1313
Discrete-time adaptive control of systems with unknown deadzones, 1
Discrete-time extensions of mixed-μ bounds to monotonic and odd monotonic nonlinearities, 423
Discrete-time infinite dimensional systems, finite-dimensional fixed-order $\mathscr{H}^2$-optimal control, optimal projection equations, 641
Discrete-time linear control, use of neural networks, 1253
Discrete-time system, linear
  stable/unstable decomposition using simple algorithm, 255
  with structured perturbations, robust stability, 739
D-stability analysis of discrete-delay perturbed systems, 493

Emitter waveform estimation in array signal processing, 965
Error actuated output feedback control theory for differential linear repetitive processes, 981
Estimation of asymptotic stability regions, trajectory reversing method, 917

Fault detection and isolation for sensors and actuators using residual generator, frequency domain approach, 1423
Fault diagnosis, optimal residual decoupling, 395
Feedback systems, linear sampled-data type, inherent design limitations, 1387
Filter, hybrid, optimal, duality with hybrid optimal regulator control, 1465
Filtering, robust Kalman type, QQ-plot approach, 837
Flat systems, flatness and defect of nonlinear systems, 1327
Flexible beam laboratory adaptive control experiment, design for on-line identification, 525
Flight control, application of scheduling local nonlinear control laws by exogenous signals, 759
Frequency response functions for nonlinear rational models, 1073

$\mathscr{H}^2$-optimal control, finite-dimensional, fixed-order, of infinite-dimensional discrete-time systems, optimal projection equations, 641
H_2-optimal controllers, generalized, computation, 999
H_2-optimization problem, structured, 1223
H_∞ attenuation and uncertainty tolerance tradeoffs study, algorithms, 823
H_∞ control analysis and design for nonlinear systems, 459
H_∞ control problem, generalized, with measurement noise, polynomial solution, 443
H_∞ distance problem and Hankel operator over a simply-connected domain, 897
Hankel operator and H_∞ distance problem over a simply-connected domain, 897

Identification
  digital, of continuous-time system, 149
  of smooth nonlinear systems based on parametrized linearization families, algorithm, 1013
  on-line, design for a flexible beam laboratory adaptive control experiment, 525
  recursive, using feedforward neural networks, 533
Infinite-dimensional discrete-time systems, finite-dimensional fixed-order $\mathscr{H}^2$-optimal control, optimal projection equations, 641
Infinite-dimensional systems, robust PI-controller, 33

Knowledge-based approach to dead-time estimation for process control, 1045

$\mathscr{L}_2$ to $\mathscr{L}_\infty$ gains for sampled-data systems, 19
Linear continuous-time systems, Lyapunov stability robust analysis and robustness design, 1233
Load balancing systems, stability analysis, 357
Loop transfer recovery for linear systems with delays in the state and the output, 1099
LQG feedforward self-tuner, asymptotic properties, 1169
Lyapunov and Sylvester equations, ill-conditioned, implicit deflation method, 1119

Lyapunov stability robust analysis and robustness design for linear continuous-time systems, 1233
Lyapunov sum, block structured, with applications to integral controllability and maximal stability of singularly perturbed systems, 47

Matrices, complex, calculus of, 749
Maximum algebra, stability of linear systems, 1191
MIMO QFT using non-diagonal controllers, 245
Model predictive control algorithm, computational efficiency improvement using wavelet transformation, 859
Modelling, robust stochastic control using internal model principle and internal model control, 809
Models, nonlinear, rational, frequency response functions, 1073
Motors, hybrid step type, control via simplified linearization technique, 1143
Multirate sampled-data systems, ripple-free deadbeat tracking, 1437
Multivariable systems, parametric state feedback controller design, 1457

Neural network, feedforward type, for recursive identification, 533
Neural networks for discrete-time linear control, 1253
Non-linear systems, flatness and defect, introductory theory and examples, 1327
Nonlinearities, monotonic and odd monotonic, discrete-time extensions to mixed-μ bounds, 423
Non-minimum phase systems with zero phase error, precision tracking control, 791
Numerical calculation of the optimal three-degree-of-freedom Wiener–Hopf controller, 757

Observer design in receding-horizon predictive control, 171
Optimal control, robust, 885
Optimization, H_2-type, structured, 1223

Parametric state feedback controller design of multivariable systems, 1457
PI-controller, robust, for infinite-dimensional systems, 33
Polynomial solution to the generalized H_∞ control problem with measurement noise, 443
Predictive excitation control of a turbo-alternator, 949
Process control, dead-time estimation, knowledge-based approach, 1045

QFT, MIMO, using non-diagonal controllers, 245
QQ-plot approach to robust Kalman filtering, 837

Regulator, hybrid, optimal, duality with hybrid optimal filter control, 1465
Repetitive control of bilinear systems with application to semi-active isolation of vibration, 1265
Ripple-free dead-beat tracking for multirate sampled-data systems, 1437
Robot manipulators, two-level control strategy, 1201
Robot systems in space, free-floating robust control, 261
Robots, robust decoupled adaptive control, 309
Robust Kalman filtering, QQ-approach, 837
Robust PI-controller for infinite-dimensional systems, 33
Robust control
  of an unknown plant, IFAC 93 benchmark, 589
  of free-floating space robot systems, 261
Robust decoupled adaptive control of robots, 309
Robust optimal control, 885
Robust performance of decentralized control systems by expanding sequential designs, 1297
Robust stability for linear discrete-time systems with structured perturbations, 739
Robust stochastic control using internal model principle and internal model control, 809

Sampled-data systems
  multirate, ripple-free dead-beat, tracking, 1437
  $\mathscr{L}_2$ to $\mathscr{L}_\infty$ gains, 19
Scheduling of local nonlinear control laws by exogenous signals, application to flight control, 759
Sensor and actuator fault detection and isolation using residual generator, frequency domain approach, 1423
Sensor array signal processing, emitter waveform estimation, 965
Servomechanisms, design via H_2-optimization, 475
Signal processing, emitter waveform estimation from array of receiving sensors, 965
Singularly perturbed systems, maximal stability, application of block Lyapunov sum, 47
Stability analysis of load balancing systems, 357
Stability and convergence analyses of an adaptive GPC based on state-space modelling, 193
Stability
  of linear systems in maximum algebra, 1191
  robust, for linear discrete-time systems with structured perturbations, 739
Stabilization analysis of discrete nonlinear systems, 1313
Stabilization of non-holonomic vehicles under kinematic constraints, 933
State covariance assignment for sampled-data feedback control systems, 719
Steering control problem formulation of low-speed tricycle-model vehicles, 783
Submarine depth control system design, 279
Sylvester and Lyapunov equations, ill-conditioned, implicit deflation method, 1119

Time-delay linear systems with delay in the state and the output, loop transfer recovery, 1099
Time-delayed process, zero-order hold equivalent transfer function, 657
Time-varying systems subject to bounded disturbances, adaptive control based on special compensation methods, 667
Tracking control, precision, of non-minimum phase systems with zero phase error, 791

Tracking, ripple-free dead-beat type, for multirate sampled-data systems, 1437
Tricycle-model vehicles, low-speed, steering control problem formulation, 783
Turbo-alternator, predictive excitation control, 507, 949
Two-time-scale linear systems, decomposition via the relevant eigenspace, 549

Uncertainty tolerance and H_∞ attenuation trade-offs study, algorithms, 823

Vehicles, non-holonomic, stabilization under kinematic constraints, 933

Zero-order hold equivalent transfer function for a time-delayed process, 657
